TITLE: Surface tension of hydrogen near the critical point  
SOURCE: Zhurnal eksperimental'noy i teoreticheskoy fiziki, v. 49, no. 5, 1965,  
1453-1456  
TOPIC TAGS: surface tension, hydrogen, critical point, liquid property  
ABSTRACT: The surface tension of normal hydrogen was measured at temperatures from 20K to the critical point, both for the purpose of practical applications and for the purpose of obtaining new data to confirm the modern theory of liquids. The measurements were made by determining the difference between the liquid levels in two capillaries of different diameters (Fig. 1), placed in a liquid-hydrogen Dewar. The temperature was varied by pumping on helium and was automatically controlled by means of an electric oven-heating circuit. The surface tension was calculated from these measurements accurate to 0.002 dynes/cm. The results obtained near the boiling point agreed with the data of earlier papers within the limit of experimental error (~1%). The results are also used to derive an analytic formula for the dependence of the

S SOURCE: Zhurnal mikrobiologii, epidemiologii i immunologii, no. 8, 1964, 22-26  
T PIC TAGS: bacteria, microbiology, phenol, penicillin, streptomycin, gamma ray  
A Abstract: By observing the early stages of bacterial development, a rapid determination of the effects produced by various factors on the microbial 11 was made. Culturing bacteria on cellophane plates yielded results in 2 hours, aiding the assessment of the bactericidal and threshold doses 4 phenol on the bacillus-like forms of *B. anthracoides*. The effect of 6 phenol depended on its concentration. Complete annihilation of the micro- 8 ganisms was observed at exposure times of 15, 30, and 45 minutes with 5- 10 5% phenol.  
The method of culturing bacteria on cellophane plates was also used 12 to observe microbial growth disturbances under the effect of penicillin, 13 streptomycin, and gamma-rays. The minimum bactericidal concentration of 14 penicillin against *B. anthracoides* was 10 units per ml. The bactericidal 15 concentration of streptomycin was 1.2 units/ml. The action of gamma-rays

TITLE:

Forces acting on a body of finite dimensions which is moving in an unbounded space filled with liquid

PERIODICAL: Referativnyy zhurnal. Mekhanika, no. 5, 1962, 50 - 51,  
abstract 5B314 (Visnyk Kyyivs'k, un-tu, 1958, no. 1,  
ser. astron. matem. ta mekhan., no. 2, 95 - 101)

TEXT: A generalized theorem of N.Ye. Zhukovskiy is applied to the case of the space flow of a liquid with an arbitrary stress tensor. The general equation for a force acting on a finite body moving in an infinite liquid is obtained in the form

$$F = J + R_{ind} + R_{pr} + F_{ic}$$

where  $J$  is the transverse force, the analog of Zhukovskiy's theorem  $J = \rho_\infty V \times \vec{\Omega}$ ,  $R_{ind}$  is the analog of the inductive resistance in the theory of a wing of finite total amplitude (in the general case

Card 1/3

Forces acting on a body of finite ...

S/124/62/000/005/022/048  
D251/D308

$$\frac{\partial \psi}{\partial t} + \frac{v^2}{2} + \frac{p}{\rho} \rightarrow \text{const.} \quad (4)$$

Hence  $n$  is a unit vector,  $E$  is a unit tensor,  $p$  is the pressure,  $\psi$  is the velocity potential and  $\overline{\tau}$  the stress tensor. The theorems of assumption, formed with these deductions, and most of all proposition (4), cannot be regarded as sufficiently substantiated. There are several misprints in the work. [Abstractor's note: Complete translation].

TITLE: Behavior of palladium and silver electrodes during the electrochemical reduction of oxygen in carbonate melts

SOURCE: Vsesoyuznoye soveshchaniye po fizicheskoy khimii rasplavlenykh soley. 2d, Kiev, 1963. Fizicheskaya khimiya rasplavlenykh soley (Physical chemistry of fused salts); trudy soveshchaniya. Moscow, Izd-vo Metallurgiya, 1965, 166-170

TOPIC TAGS: carbonate, silver, palladium, electrode potential, lithium compound, sodium compound, potassium compound, oxidation reduction reaction, oxygen, carbon dioxide

ABSTRACT: The electrochemical reduction of oxygen on Pd and Ag electrodes in molten alkali metal carbonates of various compositions ( $K_2CO_3$ - $Li_2CO_3$ ;  $Na_2CO_3$ - $Li_2CO_3$ ;  $K_2CO_3$ - $Na_2CO_3$ - $Li_2CO_3$ ; pure  $Li_2CO_3$ ) in the presence of  $CO_2$  and  $CO_2+H_2$  was studied by recording I-V curves. In the case of the Pd electrode, the reduction was found to depend strongly on the electrolyte composition: in binary salt mixtures, it becomes more efficient when  $K_2CO_3$  is substituted for  $Na_2CO_3$ , the  $Li_2CO_3$  content being the same. It is shown that the presence of oxides formed on the electrode surface affects

Orig Pub : Uch. zap. Khar'kovsk. un-t, 1956, 68, 235-244

Abstract : A study was conducted in the Warburg microrespirometer of oxygen consumption by a pulp of posterior extremity skeletal muscles, heart muscle, liver and cerebrum of Peking duck embryos from the 10th to the 26th day of development. The respiration intensity of the liver is decreased during the development period; in the skeletal muscle it is decreased to the 21st day, but is increased at the end of incubation; it is increased in the heart muscle and especially in the

cerebrum. The lowest respiration activity is observed in the skeletal muscle, more in heart than liver, but the cerebrum utilizes oxygen most. In speed of growth the above-mentioned organs develop in reverse order. The respiration intensity of embryonal tissues is somewhat higher than of adult duck tissues.

TITL: Effect of yttrium on the oxidation resistance of chromium steels in air

SOURCE: IVUZ. Chernaya metallurgiya, no. 1, 1965, 115-119

TOPIC TAGS: chromium steel, yttrium containing steel, steel oxidation resistance, oxidation, yttrium effect, Armco iron

ABSTRACT: The effect of small additions of yttrium on the oxidation resistance of Fe-alloys in air at high temperatures has been investigated. Small, 150-g ingots of Armco iron and Kh5, Kh13, and Kh25 steels containing 0-0.27% Y were melted in a nonconsumable-electrode arc furnace in an argon atmosphere, forged, and rolled into 1.5-mm strip. Oxidation tests were done in air at 900-1400°C for 5 hr. The oxidation followed an exponential rate. Yttrium intensified the oxidation of Armco iron and Kh5 steel, but strongly delayed the oxidation of Kh13 and Kh25 steels. For example, an addition of 0.11% Y decreased the weight gain in Kh13 steel from 18.6 g/m<sup>2</sup> hr at 1100 and 1400°C, respectively; for Kh25 steel with 0.02% Y, the weight gain dropped from 2.1 to 1.0 and from 6.8 to 1.5 g/m<sup>2</sup> hr.

Card 1/2

L 5644-65  
ACCESSION NR: AP5003503

This disparity is probably due to a difference in the composition of the oxide film. Generally, yttrium promotes the diffusion of oxygen but improves the adhesion of the scale to the metal. Orig. art. has: 4 figures and 2 tables. [vS]

126-131

ABSTRACT A specific example of the operation of an alumina department at one of the aluminum plants is employed to illustrate a method of designing sump wash systems taking contaminated drainage. Data are presented relative to increasing the loading of the washers with reflux circulation of red mud through the washing system. A calculation of the loss of caustic in the discard mud water, when the washer drainage is contaminated with precipitate, is adduced. It is shown that the loss of caustic with the discard mud water is sharply reduced when contamination of the drainage by precipitate is eliminated.

Title : Spectrographic discovery of lead-containing poisons in the internal organs of an animal organism

Periodical : Izv. AN SSSR. Ser. fiz. 18/2, page 296, Mar-Apr 1954

Abstract : A special spectral method was developed for the analysis of lead-containing poison in animal organisms introduced in toxic dosages. It was established, by means of spectral analysis of animal organs poisoned with lead, that in the event of any suspicion of lead poisoning it is advisable to investigate first the liver, ribs and spleen because the amount of lead discovered in these organs will best indicate the toxic dosages and time of poisoning.

Title : The Application of Toluidine Blue for Staining  
Preparations of Scrapings of the Uterine Mucosa

Orig Pub : Akusherstvo i ginekologiya, 1956, No 6, 73

Abstract : In order to demonstrate chorionic villi in scrapings  
of the uterine mucosa it is necessary to stain with  
toluidine blue. The stroma of the villi stains red,  
the remaining tissue - yellow and fibrin-pale yellow.  
The scrapings are fixed with formalin (preferably neu-  
tral) for no longer than 2 days, then imbedded in  
paraffin or celloidin and sliced with a freezing microtome.  
The slices are stained with a 0.5% solution of the stain

TITLE: A method for computing the asymmetry of the temperature distribution curves in the atmosphere over the northern hemisphere

SOURCE: Moscow. Nauchno-issledovatel'skiy institut aeroklimatologii. Trudy, no. 28, 1964. Voprosy aeroklimatografii severnogo polushariya (Problems in the aeroclimatology of the Northern Hemisphere), 62-68

TOPIC TAGS: temperature asymmetry, temperature anomaly, temperature distribution, atmospheric temperature

ABSTRACT: Methods of computing the coefficient of asymmetry of temperature distribution curves are examined. Charts of the temperature asymmetry in June and April at the 850 mb isobaric level over the northern hemisphere are given. In the northern hemisphere, varying degrees of approximation to a normal distribution law are observed. The following formula is used to evaluate the asymmetry:

$$a = \frac{\sum_{i=1}^{N_0} (t_i - \bar{t})^3 n_i}{N_0^3} \quad (1)$$

Card 1/4

L-33142-65

ACCESSION NR: AT5001797

where  $t_1$  is the value of the mean temperature in a chosen interval of gradation,  $n_1$  is the number of observations falling within the gradation,  $\bar{t}$  is the monthly average temperature over several years,  $N$  is the total number of observations for the month being considered and  $\sigma$  is the quadratic deviation. It is found that if the observed temperatures are grouped into intervals of 2C or less in formula (1) above, the resulting values of  $\alpha$  differ little from those that would have been computed considering each temperature individually. Grouping temperatures in the more usual intervals of 5C introduces a limited amount of error. Results of the study are given in chart form (see Fig. 1 and 2 of the Enclosure). Orig. art. has: 3 figures, 6 formulas and 4 tables.

TITLE: Characteristic of overall annual variability of temperature in the troposphere over the Northern Hemisphere

SOURCE: Moscow. Nauchno-issledovatel'skiy institut aeroklimatologii. Trudy, no. 31, 1965. Voprosy aeroklimatologii severnogo polushariya (Problems in the aeroclimatology of the Northern Hemisphere), 38-44

TOPIC TAGS: troposphere temperature variation, troposphere annual temperature, temperature variability

ABSTRACT: The root-mean-square annual temperature deviation is used as a measure of the variability of temperature. It is examined at the level of the isobaric surface at 850 mb, and its vertical distribution is examined along 50° NL, where the influence of continents and oceans is most pronounced. The contribution of the intra- and intermensual temperature variance to the overall annual variance is considered. It was found that over continents, the contribution of the annual temperature amplitude to the total annual variability of temperature substantially exceeds the temperature variance within each month. The region of greatest contribution of annual amplitude is located over the eastern part of

Card 1/2

L 00860-66

ACCESSION NR: AT5013142

Atta. On the contrary, over oceans, the predominant role in the overall annual variability of temperature is played by its variations within each month. As the altitude increases, the contribution of the annual variation to the overall root-mean-square temperature deviation decreases. The study reveals regions where the influence of the annual variation is so great that the average annual variability of temperature is basically determined by the amplitude of the annual variation, not by the temperature deviations of individual days from the average monthly value. Orig. art. has: 3 figures, 1 table, and 2 formulas.

TITLE: Problems of constructing and analyzing maps of extreme temperature and isobar height values

PERIODICAL: Referativnyy zhurnal, Geofizika, no. 11, 1962, 74-75,  
abstract 11B<sup>4</sup>13 (Tr. N.-i. in-ta aeroklimatol.,  
no. 16, 1962, 28-32)

TEXT: Maps of maximum and minimum air-temperature values for the isobaric surfaces 850, 800, 500, 300 and 200 mb were constructed from the data of 300 points. In extreme southern districts, where there were few data, the extreme temperature values were found with regard to the average square temperature deviation ( $\delta$ ). It was supposed that the temperature curve distribution was normal, and that 99.7% of all cases should lie in the range  $\pm 3\delta$ . Then the temperature fluctuation between extremes does not exceed 6 °. Maps of the highest (the lowest) temperature were compared with those of the average temperature for summer (winter) months. Regions of ex-

Card 1/2

D228/J307

Problems of constructing ...  
Extreme temperature values were found to coincide with the corresponding centers of cold and warmth on the average temperature maps. Graphs of the temperature change in height were used to coordinate maps of the temperature extremes of different levels. Maps are given for minimum temperature values in the northern hemisphere at the levels 850 and 100 mb. From them it can be seen that the horizontal temperature variation decreases from the 850-mb level towards the 100-mb level. Maps of the extreme heights of isobaric surfaces are prepared in the same way as those for the extreme temperatures on the isobaric surfaces. Maps were prepared for the maximum and minimum heights of the isobaric surfaces 850, 700, 500, 300 and 200 mb. Isolines were drawn every 0.08 gp km on the 5 lower levels and every 0.16 gp km on the remainder. An analysis is made of the comparison of maps of maximum and minimum isobar heights with those of the near-ground pressure for January and July. The maps considered are a good characteristic of the general atmospheric circulation and can be applied in the practical service of aviation and in other branches of the national economy.
